About Stove Top Espresso Coffee Makers

The stove top espresso coffee maker delivers authentic espresso from your stove top and is popular because you can make quality espresso quickly, without the hassle of electric espresso machines. Simply fill the lower chamber with water, fill the filter with ground coffee and place on stove top, within minutes delicious, bubbling cups of espresso will fill your pot. The safety release valve near the top of the lower chamber is a major factor in controlling the quality of your espresso as it controls the pressure at which the water is delivered to the ground coffee in the filter.

Features:

- Safety Release Valve
- Heat Resistant Handles & Knobs
- Durable Flip top lid
- Compact
- Easy to use & Clean
- Hand Wash only

Pour Over Drip Kettle

Manual coffee-making methods are becoming an increasingly popular option for home enthusiasts and coffee shop baristas alike. Our pour over stainless steel kettle is designed with a gooseneck spout that allows precise control over the flow of water onto the coffee grounds, so that you can adjust the volume and speed of your pour stream of water flowing through grinds which ultimately affects the kind of extraction one will achieve and better extraction means better tasting coffee.

The kettle has a black bakelite knob on top of the loose-fitting lid and the gooseneck spout is attached near the bottom of the sleek body. The black bakelite handle follows a wave-like motif, fitting easily into your hand.

The kettle is safe for use on gas, electric and induction stove tops and is dishwasher safe.

Pour Over Coffee Maker

Practiced by coffee lovers world wide, this time-tested Japanese coffee brewing method allows complete control over coffee to water ratio and brewing time using a slow, precise water flow that's critical to extracting a consistent, rich quality and distinctly flavourful result.

Made from heat resistant borosilicate glass with a black ABS handle and stainless steel band makes it easy to handle and clean.

The unique permanent coffee filter consists of a stainless steel outer filter with an ultra fine mesh which allows the natural oils that contribute to the coffees complex flavour to infuse the brew, while filtering out more sediment than traditional reusable coffee filters, eliminating the need to use paper coffee filters which can strip out some of the flavourful oils.

Carolina Borosilicate Glass Jug with Stainless Steel Infuser

41392
Glass Jug with Stainless Steel infuser 1Ltr

Cold Brewing with the Carolina Jug

Cold brew is all the rage these days - in South Africa and across the coffee world.

The simple Carolina jug with it's stainless steel infuser allows you to make cold brew coffee easily without any hassle. Just place your favourite ground coffee into the ultra fine stainless steel filter, add some fresh water and leave it overnight (12 hours) to enjoy a perfect cup of coffee over ice or on it's own in the morning.

Cold brewing coffee has a lot of benefits of which include: Less bitter coffee, more flavour, healthier stomache and fast access to pre-made coffee. Best of all, there are no calories in cold coffee, which makes it great for healthy lifestyles.

Jug made from Borosilicate Glass
Ultra fine stainless steel filter infuser for perfect brewing.
The lid is made of plastic and has a silicone stopper to ensure the tightest seal.

Teapots & Accessories
Cast Iron

A COMPLETE GUIDE TO CAST IRON TEAPOTS

Cast Iron teapots, known as Tetsubin teapots in Japan were first made in the 17th and 18th century and after the advent of Sencha Green Tea, these teapots became a household item for tea brewing all over China and Japan. Because these teapots are made with natural iron, the water boiled in them gives a unique flavour, resulting in the tea brewed to taste better than when brewed in other teapots or kettles.

A traditional way of brewing tea

Those who are not really into the art of tea making will not realise how important a part is played by some of the little things they overlook, such as temperature, steeping time, the equipment, quality of the loose tea leaves and the quality of the water.

Cast iron teapots have been used by tea lovers over the years to brew their favourite cup of tea. Apart from the health benefits of using cast iron, tea enthusiasts swear that they give more flavourful tea. Cast iron absorbs heat evenly, ensuring the water heats up steadily over time. This gradual approach, even heating while the loose tea leaves are floating in the water infuses the tea flavour into the water perfectly, giving the tea a pronounced flavour and extracts the healthy nutrients from the tea leaves more effectively.

The quality of our cast iron teapots is assured, because they are made with the purest of cast iron by highly skilled craftsmen who spend many days making a single teapot. Our teapots are coated on the inside with enamel, to prevent oxidation and rusting. This ensures the teapot will last long enough to perhaps even be passed down to your grandchildren.

Caring for your cast iron teapot

- To clean after use, use a dry cloth and wipe the inside of the teapot while still warm.
- Never use the cast iron teapot as a stove top kettle.
- Never place in a dishwasher, microwave or expose it to oil or salt.
- Use only for brewing tea to avoid damaging the enamel lining.
- Never use detergents or abrasive pads to wipe the cast iron teapot, only clean water for rinsing and a clean cloth for drying.
- Never leave the teapot filled with tea or water for long periods of time.
- If the teapot is warm, don't cool it off suddenly, let it cool slowly on it's own.
- To insure years of flavourful tea, never use kitchen utensils that will scratch the inside glaze of the cast iron teapot.

Borosilicate Glass

Borosilicate glass is a very good and elegant material for making tea in. The strength of the infusion can be clearly seen, as well as the graceful movement of the tea leaves as they slowly unfurl. Sophisticated glass technology also means they will keep your tea hot.

Our range offers a large selection of assorted shapes and sizes, from modern to traditional, suited to making many types of tea.

Double Wall Borosilicate Glass Mugs

The unique design of the double walled mug is appealing to the eye when filled with your favorite beverage. With its double layer of borosilicate glass it appears as though the liquid is 'floating' within the glass. This insulated mug keeps your hot drinks hot and cold drinks cold for a longer time and since the inside wall is not exposed to outside temperature, this prevents condensation keeping moisture in your drink where they belong. These hand blown glasses are an exciting product for any home, restaurant, and cafe and are a definite conversation piece.

Constructed from high quality borosilicate glass. Hand blown by highly skilled craftsmen. Care must be taken when hand washing (recommended) due to it's fragile construction | Microwave and dishwasher safe

GLASS DRINKWARE

Glass Mugs

Glass is manufactured from a series of elements consisting of soda ash, sand and lime that are mixed and heated under very high temperatures until it melts into a mixture. Tempered glass passes through the same process only that its annealing process is made shorter. It is forced to cool rapidly, which additionally increases the breaking point making it more durable. On the other hand, untempered glass is allowed to cool slowly and, therefore, will react to breakage differently.

Glass coffee mugs are popular among people of all ages. If you are a coffee lover, then you should ensure that you are drinking coffee from the right coffee mug. Glass tea and coffee mugs and cups and saucers are made from both tempered and untempered clear glass material.

Many people prefer their tea or coffee out of glass mugs and cups as they feel that it tastes better and you can see what you are drinking which adds to the drinking experience.

Stoneware

Stoneware is made from naturally occurring stoneware clay or non-refractory fire clay and differs from Porcelain not only in colour shade, but also in the way it is fired. Where Porcelain becomes vitrified during the second firing (second firing is hotter than first firing), Stoneware is vitrified during a single firing. It can be once-fired or twice-fired. Maximum firing temperatures can vary significantly, from 1100 °C to 1300 °C . Generally it can be fired at lower temperatures than Porcelain resulting in a finish that has a warmer colour than Porcelain. Stoneware can be decorated using Under-Glaze, On-Glaze, or In-Glaze techniques. Under-Glaze decorating is most commonly the preferred method of decoration used for Stoneware.

NEW BONE CHINA DRINKWARE RANGE

New Bone China

New Bone China is made using a translucent white ceramic clay containing at least 30% bone ash. In England, the percentage of bone ash must be at least 50% for a piece to be considered New Bone China. When fired at over 1200° C, it will stay pure white or a light cream and will become translucent. It is considered to be a very durable ceramic with a fine refined delicate look and is widely used to make dinnerware to use for special occasions, but many people use it for their daily needs.

Advantages of New Bone China are its translucent and fine composition, opaque texture and delicate appearance, and its lightness and durability.

CERAMIC WHITEWARE

Gourmet vitrified hotelware

The Gourmet Professional range consists of core vitrified white hotelware items for all your hospitality requirements, designed in England. Gourmet Professional hotelware has passed the stringent tests for water absorption, thermal resistance, stain resistance and durability required by the British Bureau of standards. It has gained the internationally respected BS4034 certification

Vitrified Hotelware

Vitrified Hotelware is manufactured from fine clay, minerals, feldspar and alumina (for added strength) which is fired at 1200 - 1300 degrees. A clear glaze is applied on a pure white body which adds to the durability to withstand the rigours of the catering environment and has the ability to resist staining, abrasion and detergents in normal usage.

All items are microwavable and dishwasher safe, resistant to breakage and chipping.

More about this fantastic flask

This heavy duty 1 litre stainless steel vacuum flask by Regent is ideal for keeping drinks and food hot, as well as ensuring they stay nice and cold in the summer months.

Featuring a virtually unbreakable, double walled stainless steel outer casing and inner container, it's ideal for filling with soups, stews, tea, coffee and all manner of cold drinks. An integral spout in the cap allows for controlled pouring out of the large opening, and the extendable handle and a removable carry strap make it easy to travel with.

Useful info:

Dishwasher safe

Large cap opening design

Unique flip top mechanism in the cap makes it easy to open and drink from without pushing any buttons while the cap is still tightened onto the flask.

Virtually unbreakable inner container

Keeps liquid hot at 64.6c° after 12 hours

10 year guarantee
